

## Note: 000123

---

### Overview

Number	000123
Description	SYS Data Enrichment in Installation Test Log
Version	01 from 20.12.2024
Status	Released to Customer
Language	EN
Responsible	Markus Seng, Guido Jager
Product	BCS
Category	Advanced Development

---

### Symptom

Since introduction of the Installation Test Results Review in the QuantityWare service portal (Version 8.1.0 onwards), customers are now requested to upload their BCS Installation Test results, utilizing the PDF print option in the Installation Test.

---

### Cause

Our QuantityWare support checks and confirms the BCS Installation Test results in the portal. For this, additional system information is required.

---

### Solution

With the Installation Test Results Review in the QuantityWare portal (Version 8.1.0 onwards), additional information is provided in the Installation Test Log Summary to assess if a successful and current QuantityWare installation has taken place.

Beside runtime variables such as Database, Operating System and SAP Kernel, the QuantityWare, SAP\_BASIS and IS-OIL Support Package Levels are listed.

This information allows a validation as to whether the system is based on S/4HANA or ECC ( e.g. if the system status for the installed IS-OIL component has a release above 800, this system requires

component QTYW release 30B, as this IS-OIL component is available only in S/4HANA systems ). Additionally, the last three installed QuantityWare notes and the difference between an Installation Test and a Technical Installation Test are listed.
